### **Abstract**

This document provides a detailed description of the Integration Test's planning for the PowerEnJoy system. It is based on the RASD and DD documents presented in the previous deliveries and must explain to the development team how to test the system.

# Introduction

## 1.1 Purpose

The purpose of this document is to give a guideline for the development team in order to effectively test the component's integration. The tests are described individually and the required equipment and test-data are listed in the following sections.

## 1.2 Scope

PowerEnJoy is a car-sharing service based on mobile and web applications which should allow users to reserve vehicles and use them. The application logic must be designed and allocated into components that should improve software maintainability and ease future extensions.

# Integration strategy

## 2.1 Entry criteria

Before proceeding with the integration test in this section we analysed the pre-requisites that the software must satisfy.

First of all we must have a code-complete project, all modules must be available and their performances and memory requirements have to fit the specifications. Secondly all the modules must be unit tested.

Finally the RASD and DD must be completed, they provide all the documentation that we need for proceeding in the succeeding steps.

## 2.2 Elements to be integrated

In the Design Document, we identified four main Tiers: the EIS Tier, the Business Tier, the Web Tier and the Client Tier. These are the subsystems that we must integrate in this section.

The Enterprise Information System Tier is composed principally by a DBMS that has to be integrated while in the Business Tier all the system components have to be tested individually before to be integrated. The Web Tier relates to the Client Tier and the Business Tier and both the interfaces have to be integrated. Finally, the Client Tier is composed by the On-Board computer, the Mobile application and Web application; they have to be tested individually and then they have to be integrated with their respective Tier.

## 2.3 Integration testing strategy

We choose for our integration testing strategy to adopt a bottom-up approach. In this way, we test the subsystems from the lower level to the top level, where all the modules are integrated.

There are different advantages following this strategy. The test conditions for each module are easier to create and the test results can be analysed in a simpler way. Then it's easier to localize problems and faults. In the end we can proceed with the test phase of our subsystems alongside their implementation.

On the other side the bottom-up approach brings some disadvantages. The main one is the need of driver programs in order to simulate the missing modules while they aren't already deployed. Another point is the fact that we can't test the whole program until the last module has been developed. Anyway, we think that these disadvantages are bearable comparing the advantages that this approach provides, a last evidence is the fact that probably almost all the faults occurs toward the bottom of the system.

In the testing phase we also selected the order of the subsystems to analyse, not randomly but privileging the critical ones.

We also follow a specific path before performing the integration test. First of all, we design the integration test and the specific drivers if they aren't already done. If it was not made at the unit test we design the input test data, thirdly we set the modules involved, the drivers and the input test data. Finally, we proceed performing the integration test.

## **2.4 Sequence of Component/Function Integration**

NOTE: The structure of this section may vary depending on the integration strategy you select in Section 2.3. Use the structure proposed below as a non mandatory guide.

### 2.4.1 Software Integration Sequence

The following figures (fig.2.1, fig.2.2) show the components of the PowerEnJoy system integrated into subsystems, the arrows indicate the order of integration.

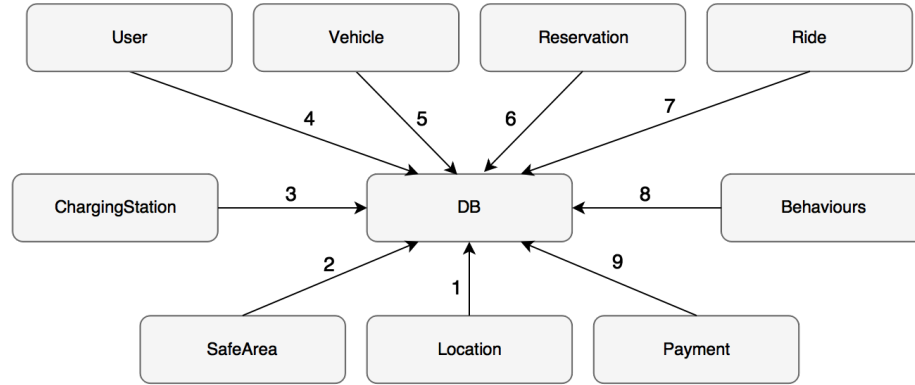

Figure 2.1: Integration sequence for the Enterprise-Information-System subsystem

ID	Integration Test	Paragraphs
I01	Location → DB	3.1 4.1
I02	SafeArea → DB	3.2 4.1
I03	ChargingStation → DB	3.3 4.1
I04	User → DB	3.4 4.1
I05	Vehicle → DB	3.5 4.1
I06	Reservation → DB	3.6 4.1
I07	Ride → DB	3.7 4.1
I08	Behaviours → DB	3.8 4.1
I09	Payment → DB	3.9 4.1

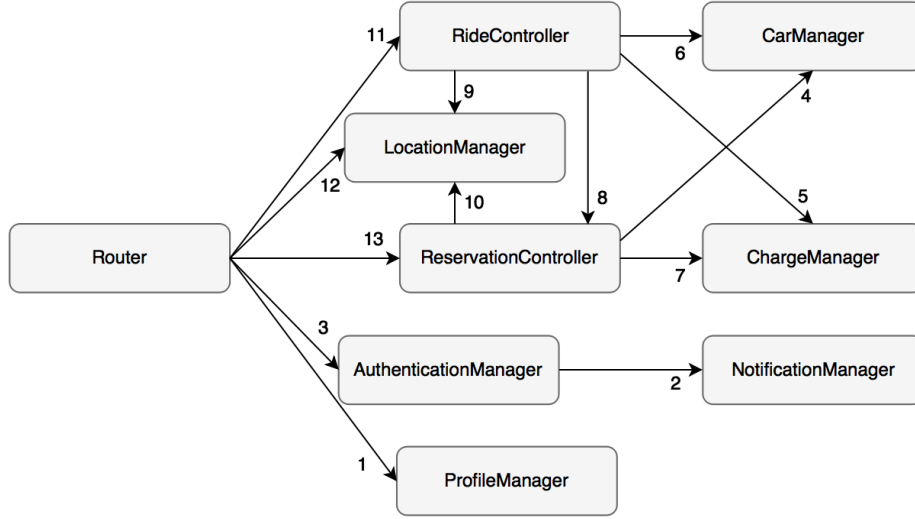

Figure 2.2: Integration sequence for the Business subsystem

ID	Integration Test	Paragraphs
I10	Router → ProfileManager	3.10 4.2
I11	AuthenticationManager → NotificationManager	3.11 4.2
I12	Router → AuthenticationManager	3.12 4.2
I13	ReservationController → CarManager	3.13 4.2
I14	RideController → ChargeManager	3.14 4.2
I15	RideController → CarManager	3.15 4.2
I16	ReservationController → ChargeManager	3.16 4.2
I17	RideController → ReservationController	3.17 4.2
I18	RideController → LocationManager	3.18 4.2
I19	ReservationController → LocationManager	3.19 4.2
I20	Router → RideController	3.20 4.2
I21	Router → LocationManager	3.21 4.2
I22	Router → ReservationController	3.22 4.2

### 2.4.2 Subsystem Integration Sequence

Figure 2.3 the order in which the subsystems will be integrated.

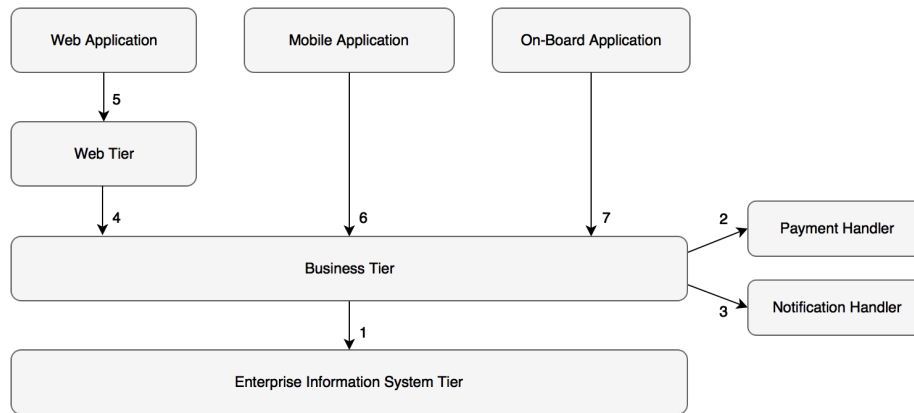

Figure 2.3: Integration sequence for the subsystems

# Test case specifications

For each step of the integration process identified above, describe the type of tests that will be used to verify that the elements integrated in this step perform as expected. Describe in general the expected results of the test set. You may refer to Chapter 3 and Chapter 4 of the test plan example [1] as an example of what we expect. (NOTE: This is not a detailed description of test protocols. Think of this as the test design phase. Specific protocols will be written to fulfill the goals of the tests identified in this section.)

## 3.1 Sample Integration test case I01

<b>Test Case Identifier</b>	I01T1
<b>Test Item(s)</b>	Location → DB
<b>Input Specification</b>	Create typical Location input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	N/A

## 3.2 Sample Integration test case I02

<b>Test Case Identifier</b>	I02T1
<b>Test Item(s)</b>	SafeArea → DB
<b>Input Specification</b>	Create typical SafeArea input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I1 succeeded

### 3.3 Sample Integration test case I03

<b>Test Case Identifier</b>	I03T1
<b>Test Item(s)</b>	ChargingStation → DB
<b>Input Specification</b>	Create typical ChargingStation input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I1 succeeded

### 3.4 Sample Integration test case I04

<b>Test Case Identifier</b>	I04T1
<b>Test Item(s)</b>	User → DB
<b>Input Specification</b>	Create typical User input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I1 succeeded

### 3.5 Sample Integration test case I05

<b>Test Case Identifier</b>	I05T1
<b>Test Item(s)</b>	Vehicle → DB
<b>Input Specification</b>	Create typical Vehicle input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I1 succeeded

### 3.6 Sample Integration test case I06

<b>Test Case Identifier</b>	I06T1
<b>Test Item(s)</b>	Reservation → DB
<b>Input Specification</b>	Create typical Reservation input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I4 and I5 succeeded

### 3.7 Sample Integration test case I07

<b>Test Case Identifier</b>	I07T1
<b>Test Item(s)</b>	Ride → DB
<b>Input Specification</b>	Create typical Ride input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I1, I4, I5 and I6 succeeded. Payment Driver

### 3.8 Sample Integration test case I08

<b>Test Case Identifier</b>	I08T1
<b>Test Item(s)</b>	Behaviour → DB
<b>Input Specification</b>	Create typical Behaviour input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I7 succeeded

### 3.9 Sample Integration test case I09

<b>Test Case Identifier</b>	I09T1
<b>Test Item(s)</b>	Payment → DB
<b>Input Specification</b>	Create typical Payment input
<b>Output Specification</b>	Check if the correct functions are called in the DB
<b>Environmental Needs</b>	I4, I6 and I7 succeeded

### 3.10 Sample Integration test case I10

<b>Test Case Identifier</b>	I10T1
<b>Test Item(s)</b>	Router → ProfileManager
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the ProfileManager
<b>Environmental Needs</b>	N/A

### 3.11 Sample Integration test case I11

<b>Test Case Identifier</b>	I11T1
<b>Test Item(s)</b>	AuthenticationManager → NotificationManager
<b>Input Specification</b>	Create typical AuthenticationManager input
<b>Output Specification</b>	Check if the correct functions are called in the NotificationManager
<b>Environmental Needs</b>	N/A

### 3.12 Sample Integration test case I12

<b>Test Case Identifier</b>	I12T1
<b>Test Item(s)</b>	Router → AuthenticationManager
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the AuthenticationManager
<b>Environmental Needs</b>	I11 succeeded

### 3.13 Sample Integration test case I13

<b>Test Case Identifier</b>	I13T1
<b>Test Item(s)</b>	ReservationController → CarManager
<b>Input Specification</b>	Create typical ReservationController input
<b>Output Specification</b>	Check if the correct functions are called in the CarManager
<b>Environmental Needs</b>	N/A

### 3.14 Sample Integration test case I14

<b>Test Case Identifier</b>	I14T1
<b>Test Item(s)</b>	RideController → ChargeManager
<b>Input Specification</b>	Create typical RideController input
<b>Output Specification</b>	Check if the correct functions are called in the ChargeManager
<b>Environmental Needs</b>	N/A

### 3.15 Sample Integration test case I15

<b>Test Case Identifier</b>	I15T1
<b>Test Item(s)</b>	RideController → CarManager
<b>Input Specification</b>	Create typical RideController input
<b>Output Specification</b>	Check if the correct functions are called in the CarManager
<b>Environmental Needs</b>	N/A

### 3.16 Sample Integration test case I16

<b>Test Case Identifier</b>	I16T1
<b>Test Item(s)</b>	ReservationController → ChargeManager
<b>Input Specification</b>	Create typical ReservationController input
<b>Output Specification</b>	Check if the correct functions are called in the ChargeManager
<b>Environmental Needs</b>	N/A

### 3.17 Sample Integration test case I17

<b>Test Case Identifier</b>	I17T1
<b>Test Item(s)</b>	RideController → ReservationController
<b>Input Specification</b>	Create typical RideController input
<b>Output Specification</b>	Check if the correct functions are called in the ReservationController
<b>Environmental Needs</b>	I13 and I16 succeeded

### 3.18 Sample Integration test case I18

<b>Test Case Identifier</b>	I18T1
<b>Test Item(s)</b>	RideController → LocationManager
<b>Input Specification</b>	Create typical RideController input
<b>Output Specification</b>	Check if the correct functions are called in the LocationManager
<b>Environmental Needs</b>	N/A

### 3.19 Sample Integration test case I19

<b>Test Case Identifier</b>	I19T1
<b>Test Item(s)</b>	ReservationController → LocationManager
<b>Input Specification</b>	Create typical ReservationController input
<b>Output Specification</b>	Check if the correct functions are called in the LocationManager
<b>Environmental Needs</b>	N/A

### 3.20 Sample Integration test case I20

<b>Test Case Identifier</b>	I20T1
<b>Test Item(s)</b>	Router → RideController
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the RideController
<b>Environmental Needs</b>	I14, I15, I17 and I18 succeeded

### 3.21 Sample Integration test case I21

<b>Test Case Identifier</b>	I21T1
<b>Test Item(s)</b>	Router → LocationManager
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the LocationManager
<b>Environmental Needs</b>	N/A

### 3.22 Sample Integration test case I22

<b>Test Case Identifier</b>	I22T1
<b>Test Item(s)</b>	Router → ReservationController
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the ReservationController
<b>Environmental Needs</b>	I13, I16 and I19 succeeded

### 3.23 Sample Integration test case I23

<b>Test Case Identifier</b>	I22T1
<b>Test Item(s)</b>	Router → ReservationController
<b>Input Specification</b>	Create typical Router input
<b>Output Specification</b>	Check if the correct functions are called in the ReservationController
<b>Environmental Needs</b>	I13, I16 and I19 succeeded

# Test procedures

## 4.1 Sample Integration test procedure TP1

<b>Test Procedure Identifier</b>	TP1
<b>Purpose</b>	This test procedure verifies whether the DB: <ul style="list-style-type: none"><li>• can handle entities</li><li>• can handle client input</li><li>• can handle agent input</li><li>• can output requested information to a client</li><li>• can output requested information to an agent</li></ul>
<b>Procedure Steps</b>	Execute I5-I6 after I1-I4

## 4.2 Sample Integration test procedure TP2

<b>Test Procedure Identifier</b>	TP1
<b>Purpose</b>	<p>This test procedure verifies whether the DB:</p> <ul style="list-style-type: none"> <li>• can handle entities</li> <li>• can handle client input</li> <li>• can handle agent input</li> <li>• can output requested information to a client</li> <li>• can output requested information to an agent</li> </ul>
<b>Procedure Steps</b>	Execute I5-I6 after I1-I4

# Tools and test equipment required

Identify all tools and test equipment needed to accomplish the integration. Refer to the tools presented during the lectures. Explain why and how you are going to use them. Note that you may also use manual testing for some part. Consider manual testing as one of the possible tools you have available.

# Program stubs and test data required

Based on the testing strategy and test design, identify any program stubs or special test data required for each integration step.

# Appendix A: Used Tools

## A.1 $\text{\LaTeX}$

Used to format and redact this document

## A.2 *git*

Used as version control system in order to lead development

## A.3 *draw.io*

Used to draw mockups and diagrams

# Appendix B: Hours of work

These are the hours of work spent by each group member in order to redact this document:

- Ruaro Nicola: 2 hours
- Gregori Giacomo: 2 hours
- Total worktime: 4 hours

# Appendix C: Revisions

These sections will be eventually redacted during future post-release updates in order to approach the ITPD modifiability providing a comfortable and highly effective way to trace changes:
